Speed

Please attempt to determine a Lat / Long for the contact at initial detection. We recommend using JMPS to reference the sensor-derived bearing and range relative to the bullseye you had in use. If that method is not available, any reasonable derivation of location will work, but please be as specific as possible and make a note in the comments section. These locations may be used to cue other means of tracking.

Was the contact moving? Yes

Direction/Speed  
(Ex. 090/15)

Please use the field below to describe the contact and any interaction in your own words with as much detail as possible. Please be sure to include any detail not included in questions above.

Contact at 21:09z to 21:17z 04SEP2020. MGRS location 38P LT 71 (b)(1)1.4a (b)(1)1.4a (estimated lat/long (b)(1)1.4a). While at 23,819 HAT over the Gulf of Aden we tracked a round, cold object in IR traveling 168 degrees at 277 mph. It made a few abrupt directional changes during the 8 minute contact. Our sensor was aimed -39 degrees below our altitude with a slant range of 6.17NM and ground range of 8.81KM. The IR sensor was set to black hot and the object in question was a bright white.

Don't use the purple "submit" button! Save this form with filename "**Date\_Squadron\_RF.pdf**" and email it to 3.5c, (b)(6) (Also in the global). For troubleshooting, call 3.5c, (b)(6)

Thank you for your time. Please ensure all display tapes are ripped for the entire time of interaction and saved as a .wmv (Example: 4 May VFA-106 HUD.wmv). Squadron intel personnel shall upload those files to the repository located at this link.
